

ASIM WAHEED

Software Engineering Student | Full Stack Developer

asimwaheed856@gmail.com | +92-318-0935540 | Islamabad, Pakistan | github.com/asimwaheed | <https://www.linkedin.com/in/asim-waheed>

PROFESSIONAL SUMMARY

PROFESSIONAL SUMMARY

Final-year Software Engineering student at SZABIST Islamabad with hands-on experience in full-stack web development using React.js, Node.js, Express.js, PHP, JavaScript, MongoDB, and MySQL. Experienced in designing and developing responsive web applications, building RESTful APIs, implementing authentication and role-based access control (RBAC), and managing relational and NoSQL databases. Proficient with Git, GitHub, Postman, Firebase Authentication, and Agile development practices. Currently developing a Smart Government Contract Bidding System as a Final Year Project, focusing on secure backend development, API integration, database design, and scalable web application architecture. Passionate about solving real-world problems through software engineering and seeking a Software Engineering or Full-Stack Developer internship where I can contribute to impactful projects while expanding my technical expertise.

TECHNICAL SKILLS

Programming Languages	JavaScript, PHP, C++, HTML5, CSS3
Frontend Technologies	React.js, Responsive Web Design, React Router, Bootstrap
Backend Technologies	Node.js, Express.js, RESTful API Integration, Firebase Authentication, JWT Authentication
Databases	MySQL, SQL, Relational Database Design, CRUD Operations
CMS & Website Builders	WordPress, Webflow
Developer Tools	Git, GitHub, VS Code, Postman
Concepts	OOP, MVC Architecture, RBAC, CRUD Operations, SDLC, Agile Development

EDUCATION

Bachelor of Science in Software Engineering | SZABIST Islamabad | 2023 – Present • Islamabad, Pakistan

- Final Year Project: Smart Government Contract Bidding System — a secure full-stack web application built using React.js, Node.js, Express.js, MongoDB, HTML5, CSS3, and JavaScript to automate government tender management, contractor registration, bid submission, contractor evaluation, and role-based access control (RBAC)
- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Web Engineering, Computer Networks.

FSC Pre-Medical | The Glorious College of Science & Technology, Bamkhel Swabi | 2019 – 2021

- Scored 79% in BISE Mardan board examinations.

PROJECTS

Smart Government Contract Bidding System | Final Year Project | React.js, Node.js, Express.js, MongoDB, JavaScript, HTML5, CSS3

- Designed and developed a full-stack MERN web application to digitize the government contract bidding process, enabling contractors to register, submit bids, and track tender status through an online platform.

- Built secure RESTful APIs using Node.js and Express.js for user authentication, contractor management, tender management, bid submission, and project workflows, integrated with a MongoDB database.
- Implemented Firebase Authentication and Role-Based Access Control (RBAC) for three user roles—Government Officials, Contractors, and Administrators—ensuring secure access to role-specific dashboards and system functionalities.
- Developed responsive user interfaces using React.js, HTML5, CSS3, and JavaScript, providing an intuitive experience across desktop and mobile devices.
- Designed and optimized MongoDB collections and CRUD operations for users, contractors, tenders, bids, and project data, ensuring efficient data storage and retrieval.
- Collaborated with team members following Software Development Life Cycle (SDLC) principles, Git version control, and Agile development practices during the project lifecycle.

School Management System | *PHP, MySQL, JavaScript, HTML5, CSS3*

- Delivered a multi-module web application covering student enrollment, attendance recording, and grade management for a simulated dataset of 500+ student records.
- Wrote optimized MySQL queries with indexed foreign keys, reducing average query execution time by 25% compared to unindexed baseline tests.
- Produced a mobile-responsive front end using HTML5 and CSS3 Flexbox, verified across Chrome, Firefox, and Edge at 375px, 768px, and 1280px breakpoints.

Library Management System | *C++ | Fundamentals of Programming*

- Coded a console application in C++ that manages 200+ book records with add, search, borrow, and return operations using structured file I/O.
- Reduced average search time from $O(n)$ linear scan to $O(\log n)$ by sorting records and applying binary search on the book title field.

Bank Management System | *C++ | Object-Oriented Programming*

- Modelled account types (savings, current) using class inheritance and polymorphism, allowing the system to process deposits, withdrawals, and balance queries through a unified interface.
- Added input validation on all transaction fields, preventing invalid entries and reducing runtime errors to zero during 50-case functional testing.

Blogging Website | *PHP, MySQL, JavaScript, HTML5, CSS3 | Localhost*

- Created a PHP/MySQL blogging platform supporting post creation, editing, deletion, user registration, login, and session-based authentication.
- Sanitized all user inputs with `htmlspecialchars()` and prepared statements, eliminating SQL injection and XSS vulnerabilities identified during manual testing.

CERTIFICATIONS

-
- Claude 101 – Anthropic Completed introductory training on Claude AI, prompt engineering, AI-assisted development, and responsible AI usage.
 - Microsoft Learn Student Ambassador — Microsoft (Active, 2023–present)
